Project Proposal: Customer Churn Prediction

1. Team Name and Members

- **Team Name:** ML
- **Member 1:** Kenzhalieva Zhansaya (ID: 24B031837)
- **Member 2:** Sergazyuly Adilet (ID: 24B032017)
- **Member 3:** Niyazbekova Elza (ID: 24B031923)

2. Chosen Dataset

- **Name:** Telco Customer Churn
- **Source URL:** k Telco Customer Churn
- **Dimensions:** 7,043 rows and 21 columns.

3. Problem Type

- **Classification:** We are categorizing customers into two groups those who stay and those who leave.

4. Target Variable

- **Churn**: This variable indicates whether the customer departed the company within the last month (Yes/No).

5. One Clear Hypothesis

- **Hypothesis:** "We hypothesize that contract type and monthly charges are the primary drivers of customer attrition. Specifically, customers on month-to-month contracts with high monthly charges are significantly more likely to churn than those on two-year contracts, regardless of the additional services they use."

6. Planned feature approach

Contract Type: Customers with month-to-month contracts have more flexibility to leave, making this feature a strong predictor of churn.

Monthly Charges: Higher monthly costs may increase dissatisfaction, leading to a higher likelihood of churn

7. Team Role Assignments

- Modeling & Pipeline Construction - **Adilet**
- EDA & Data Cleaning - **Zhansaya**
- Report Writing & Presentation Preparation - **Elza**
